

# How To Format External Hard Drive On Mac

Before you start to connect and use an external hard drive on your Mac computer, you might have to format it. If you have already used the hard drive on any other computer, formatting will erase all the data that is stored on it. So, before you format external hard drive on Mac, don't forget to get a backup of your data. By following the below instructions, you can format an external hard drive on your Mac computer.

# Format Hard Drive For Mac And PC

- First, make sure to connect the external hard drive to your Mac computer.
- Next, open the Finder app using the dock at the bottom of the window.
- Select the Applications category from the left menu panel on the screen.
- Click on the Utilities option from the list.
- Here, choose the Disk Utility option.
- Click the View button at the top-left corner of the window.
- Select the Show All Devices option.

- Now, you will see the external hard drive that is connected to your Mac computer. **More....**
